BYK Additives
Improvements non-stop

Whether it's sandwich panels or cladding – industrial metal sheets that have been manufactured for further processing require highly stress-resistant coatings. BYK additives improve, in all areas of coil coating application, the properties of coatings that need to withstand fast line speeds and extreme deformation. Excellent coating colour stability, robust surface features, such as slip, scratch and abrasion resistance, and improved cleanability can be achieved using BYK solutions. Non-stop on the coating line!
