

BYK Additives

Special attribute:
Especially worth listening to

Whether it's Baroque on the piano or rock & roll from an electric guitar, where the coating of wooden musical instruments is concerned, BYK is universally popular. BYK additives don't only meet with a positive response because they give a virtuoso performance in terms of providing smooth, glossy and yet robust, scratch-resistant wood surfaces; they also help to produce the clear, transparent sound of instruments. It's no wonder, then, that BYK sets the tone with coatings for pianos and guitars.
